Congratulations! and thank you, you've just purchased the fastest squeegee on the market. The Eliminator™ is designed for humongous windows and mirrors. It comes in sizes, 48", 54", 60", 66", 72"" and 78".

Eliminator™ squeegees are surprisingly rigid despite their enormous lengths. In part because of the inherent stiffness of all our channels which are extruded out of aluminum. In addition, they have a brilliant mounting system that spreads pressure evenly along their entire length. Since window glass is rarely flat, you can also fine-tune the stiffness to compensate for dips and bumps... no tools necessary. Stiffer for flatter windows, more flexible for not-so-perfect windows.

We recommend using an extension pole when working with Eliminator™ squeegees. They're particularly suited for professional work on large store-fronts. These large squeegees require more skill than the shorter sizes. But the benefits [in terms of speed and higher earnings] are well worth it.

TIPS:

- 1. When working in vertical strokes, center the handle precisely.**
- 2. When working in horizontal strokes, position the handle slightly off center so the downward-pointing end is longer. In this configuration, gravity helps the Eliminator™ level itself and align with the window so it's easier to work with.**
- 3. Store in its packing tube when not in use.**
